Isolated presentlin associated membrane proteins and nucleic acids encoding them, useful for investigating and diagnosing Alzheimer's disease and other neurodegenerative diseases -

Claim 8; Page 67-68; 79pp; English.

diseases (e.g. Alzheimer's disease, Levy body variant, Parkinson's disease-dementia complex), neuropsychiatric diseases (e.g. schizophrenia, age-associated memory loss), developmental disorders, and neoplasms. These may further be used to deduce the structural organisation and topology of PAMP, to identify proteins which interact with PAMP either in concert with presenilin 1 (PSI) and PS2, or independently, and to create cell-free systems, transfected cell lines, and animal modes of This sequence encodes the human presentilin associated membrane protein (PAMP) of the invention. PAMP polypeptides may be used as an immunogen generate antibodies that recognise the PAMP polypeptide. The PAMP nucleotide and protein sequence may also be used for diagnosing individuals who are at risk or who have a variety of neurodegenerative neurodegenerative and other diseases. 1mmunogen to

Isolated presentlin associated membrane proteins and nucleic action encoding them, useful for investigating and diagnosing Alzheimer disease and other neurodegenerative diseases

9; Page 70-71; 79pp; English.

This sequence encodes the mouse presentilin associated membrane protein (PAMP) of the invention. PAMP polypeptides may be used as an immunogen generate antibodies that recognise the PAMP polypeptide. The PAMP nucleotide and protein sequence may also be used for diagnosing individuals who are at risk or who have a variety of neurodegenerative diseases (e.g. Alzheimer's disease. Levy body variant, Parkinson's disease-dementia complex), neuropsychiatric diseases (e.g. schizphreni age-associated memory loss), developmental disorders, and neoplasms. These may further be used to deduce the structural organisation and topology of PAMP, to identify proteins which interact with PAMP either in concert with presentlin 1 (PS1) and PS2, or independently, and to create cell-free systems, transfected cell lines, and animal modes of neurodegenerative and other diseases. phrenia, ç

                                                                                                                          The present sequence represents a human expressed sequence tag (EST). The polynucleotide, which is a secreted EST, and the encoded protein are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoiesis regulating activity, tissue growth activity, haematopiesis regulating chemotactic/chemokinetic activity, activin/inhibin activity, cadherin/tumour invasion suppressor activity, tumour inhibition activity. The polynucleotide may also be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                              New polynucleotides encoding human secreted proteins - derived from e.g. human blood, kidney, foetal lung, placenta, testes, brain, ovary, pituitary, retina and colon cDNA libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; secreted protein; expressed sequence tag; EST; haematopoiesis; tissue growth; activin; inhibin; chemotaxis; chemokinesis; haemostatic; receptor; ligand; thrombolytic; anti-inflammatory; cadherin; anti-tumour; gene therapy; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA; of the mRNA because they are well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain nastream remniatory semences and to design appreciation.

PAMP polypeptides may be used as an immunogen to generate antibodies that recognise the PAMP polypeptide. The PAMP nucleotide and protein sequence may also be used for diagnosing individuals who are at risk or who have a variety of neurodegenerative diseases (e.g. Alzheimer's disease, Lewy body variant, Parkinson's disease-dementia complex), neuropsychiatric diseases (e.g. schizphire age-associated memory loss), developmental disorders, and neoplasms. These may further be used to deduce the structural organisation and topology of PAMP, to identify proteins which interact with PAMP pithe in concert with presenilin 1 (PS1) and PS2, or independently, and to create cell-free systems, transfected cell lines, and animal modes of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 473 BP; 129 A; 116 C; 117 G; 111 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Isolated presentlin associated membrane proteins and nucleic action encoding them, useful for investigating and diagnosing Alzheimer disease and other neurodegenerative diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents an expressed sequence tag used to isolate the

                                                                                                                                                                              This sequence represents an expressed sequence tag used to isolate the human presenilin associated membrane protein (PAMP) coding sequences of the invention. PAMP polypeptides may be used as an immunogen to generate antibodies that recognize the PAMP polypeptide. The PAMP nucleotide and protein sequence may also be used for diagnosing individuals who are at risk or who have a variety of neurodegenerative diseases (e.g. Alzheimer's disease, Lewy body variant, Parkinson's disease-dementia complex), neuropsychiatric diseases (e.g. schizophrenia, age-associated memory loss), developmental disorders, and neoplasms. These may further be used to deduce the structural organisation and topology of PAMP, to identify proteins which interact with PAMP either in concert with presenilin 1 (PS1) and PS2, or independently, and to create cell-tree systems, transfected cell lines, and animal modes of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PAMP; presentiin associated membrane protein; immunogen; neurodegenerative disease; Alzheimer's disease; Lewy body variant; Parkinson's disease-dementia complex; neuropsychiatric disease; schizophrenia; age-associated memory loss; developmental disorder; neoplasm; diagnosis; EST; expressed sequence tag; ds.

The PAMP nucleotide and protein sequence may also be used for diagnosing individuals who are at risk or who have a variety of neurodegenerative diseases (e.g. Alzheimer's disease, Levy body variant, Parkinson's disease-dementia complex), neuropsychiatric diseases (e.g. schizophrenia, age-associated memory loss), developmential disorders, and neoplasms. These may further be used to deduce the structural organisation and topology of PAMP, to identify proteins which interact with PAMP either in concert with presentlin 1 (PSI) and PS2, or independently, and to create cell-free systems, transfected cell lines, and animal modes of neurodegenerative and other diseases.

They can be used to facilitate tagging of most human genes, for mapping locations of expressed gene on chromosomes, for individual or forensic identification, for mappi locations of disease-associated genes, for identification of tisbue type, and for prepn. of antisense sequences, probes and constructs. EST01062 has an "excellent" coding probability as evaluated using the

PAMP polypeptides may be used as an immunogen to generate antibodies that recognist the PAMP polypeptide. The PAMP nucleotide and protein sequence may also be used for diagnosing nidividuals who are at risk or who have a variety of neurodegenerative diseases (e.g. Alzheimer's disease, Lewy body variant, Parkinson's diseases dementia complex), neuropsychiatric diseases (e.g. schizophrenia, age-associated memory loss), developmental disorders, and neoplasms. These may further be used to deduce the structural organisation and topology of PAMP, to identify proteins which interact with PAMP either in concert with presenilin 1 (PS1) and PS2, or independently, and to create cell-free systems, transfected cell lines, and animal modes of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             30-DEC-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   12-FEB-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents an expressed sequence tag used to isolate the human presenilin associated membrane protein (PAMP) coding sequences of the invention. PAMP polypeptides may be used as an immunogen to generate antibodies that recognise the PAMP polypeptide. The PAMP nucleotide and protein sequence may also be used for diagnosing individuals who are at risk or who have a variety of neurodegenerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       01-APR-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Вþ
                                                   treating, preventing or ameliorating medical conditions in humans and animals, although no supporting_data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoisesis regulating activity, tissue growth activity, activity, activity, hemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, tumour inhibition
                                                                                                                                                                             This sequence represents an expressed sequence tag (EST), and is a polynucleotide of the invention. The polynucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for
                                                                                                                                                                                                                                                                                                                    New polynucleotides encoding human secreted proteins - derived from e.g. human blood, kidney, foetal lung, placenta, testes, brain, ovary, pituitary, retina and colon cDNA libraries
                                               activity.
                                                                                                                                                                                                                                                                                           Claim 1; Page 361; 633pp; English.

                 human presentiin associated membrane protein (PAMP) coding sequences of the invention. PAMP polypeptides may be used as an immunogen to generate antibodies that recognise the PAMP polypeptide. The PAMP nucleotide and protein sequence may also be used for diagnosing individuals who are at risk or who have a variety of neurodegenerative diseases (e.g. Alzheimer's disease, Lewy body variant, Parkinson's disease dementia complex), neuropsychiatric diseases (e.g. Schizophrenia, Phese may further be used to deduce the structural organisation and topology of PAMP, to identify proteins which interact with PAMP either in concert with presentlin 1 (PSI) and PS2, or independently, and to create cell-free systems, transfected cell lines, and animal modes of neurodegenerative and other diseases.
                                                                                                                                                                                                                                                                                                     Isolated presenilin associated membrane proteins and nucleic acids encoding them, useful for investigating and diagnosing Alzheimer's disease and other neurodegenerative diseases
                                                                                                                                                                                                                                       This sequence represents an expressed sequence tag used to isolate the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2122 atttctcatcgccagcaaagagcttgagttgatcaccctgacagtgggcttc 2173
                                             This sequence represents an expressed sequence tag used to isolate the human presenilin associated membrane protein (PAMP) coding sequences of the invention. PAMP polypeptides may be used as an immunogen to generate antibodies that recognise the PAMP polypeptide. The PAMP nucleotide and protein sequence may also be used for diagnosing individuals who are at risk or who have a variety of neurodegenerative diseases (e.g. Alzheimer's disease, Lewy body variant, Parkinson's diseases (e.g. achizophrenia, neuropsychiatric diseases (e.g. schizophrenia, age-associated memory loss), developmental disorders, and neoplasms. The sease may further be used to deduce the structural organisation and topology of PAMP, to identify proteins which interact with PAMP either in concert with presentlin 1 (PSI) and PS2, or independently, and to create cell-free systems, transfected cell lines, and animal modes of neurodegenerative and other diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PAMP; presentiin associated membrane protein; immunogen; neurodegenerative disease; Alzheimer's disease; Lewy body variant; parkinson's disease-dementia complex; neuropsychiatric disease; schizophrenia; age-associated memory loss; developmental disorder;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence encodes a presentilin associated membrane protein (PAMP) of the invention. PAMP polypeptides may be used as an immunogen to generate antibodies that recognise the PAMP polypeptide. The PAMP nucleotide and protein sequence may also be used for diagnosing individuals who are at risk or who have a variety of neurodegenerative diseases (e.g. Alzheimer's disease, Lewy body variant, Parkinson's disease dementia complex), neuropsychiatric diseases (e.g. schizophrenia, age-associated memory loss), developmental disorders, and neoplasms. These may further be used to deduce the structural organisation and topology of PAMP, to identify proteins which interact with PAMP either in concert with presenilin 1 (PS1) and PS2, or independently, and to create cell-free systems, transfected cell lines, and animal modes of neurodecenerative and animal transfected cell lines, and animal modes of

; Sequence 33, Application US/09247373B

; Patent No. 6168954.
             GENERAL INFORMATION:
APPLICANT: MCGONIGLE, BRIAN
APPLICANT: O'KEEFE, DANIEL
TITLE OF INVENTION: SCYBEAN GLUTATHIONE-S-TRANSFERASE ENZYMES
FILE REFERENCE: CL-1108-A
CURRENT APPLICATION NUMBER: US/09/247,373B
CURRENT APPLICATION NUMBER: 1999-02-10
PRIOR APPLICATION NUMBER: 08/924,747
PRIOR FILING DATE: 1997-09-05
                                                                                                                                                                                                                                                                                                                                                                   US-08-487-826B-13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Patent No. 5993827
GENERAL INFORMATION:
